Road Safety & Motorsport Facility

Philosophy/Business

A well designed Road Safety Training Centre (RSTC) makes road safety a public issue - and road safety always has a positive public image!

- **It offers safe, state-of-the-art training environment**
- **It increases road safety awareness**
- **It safes lives!**
- **It is an event location (product presentations, incentive events)**
- **It creates a new business field**
- **It creates jobs**
- **It is a new type of infrastructure**

Modern training programmes in multifunctional road safety training centres provide a powerful and proven tool to increase driver skills, safety awareness and road safety!

Test & Training International (TTI) designs and realises road safety training facilities and provides the required know-how to operate the RSTC successfully.

- Based on 25 years of experience to ensure long-lasting training and business success.
- Created from the operator's perspective; trying to increase multi-purpose use and decrease operating costs
- Standardised training modules are tailored to the client's requirements and to local circumstances

Road Safety Training Centres

Test & Training System

The Test & Training System makes **use of standardised Training Modules (TMs)** which have been developed and optimised in many years of operative experience. These modules are **designed to execute different training programmes (courses)**. Such **training programmes (courses)** will **comprise several exercises** to develop and **enhance the skills, knowledge and behaviour** of the participating drivers. Furthermore, the multifunctional designed training areas and training modules allow driver training **based on sound didactical and methodological models** for basic and advanced drivers as well as for highly skilled drivers.

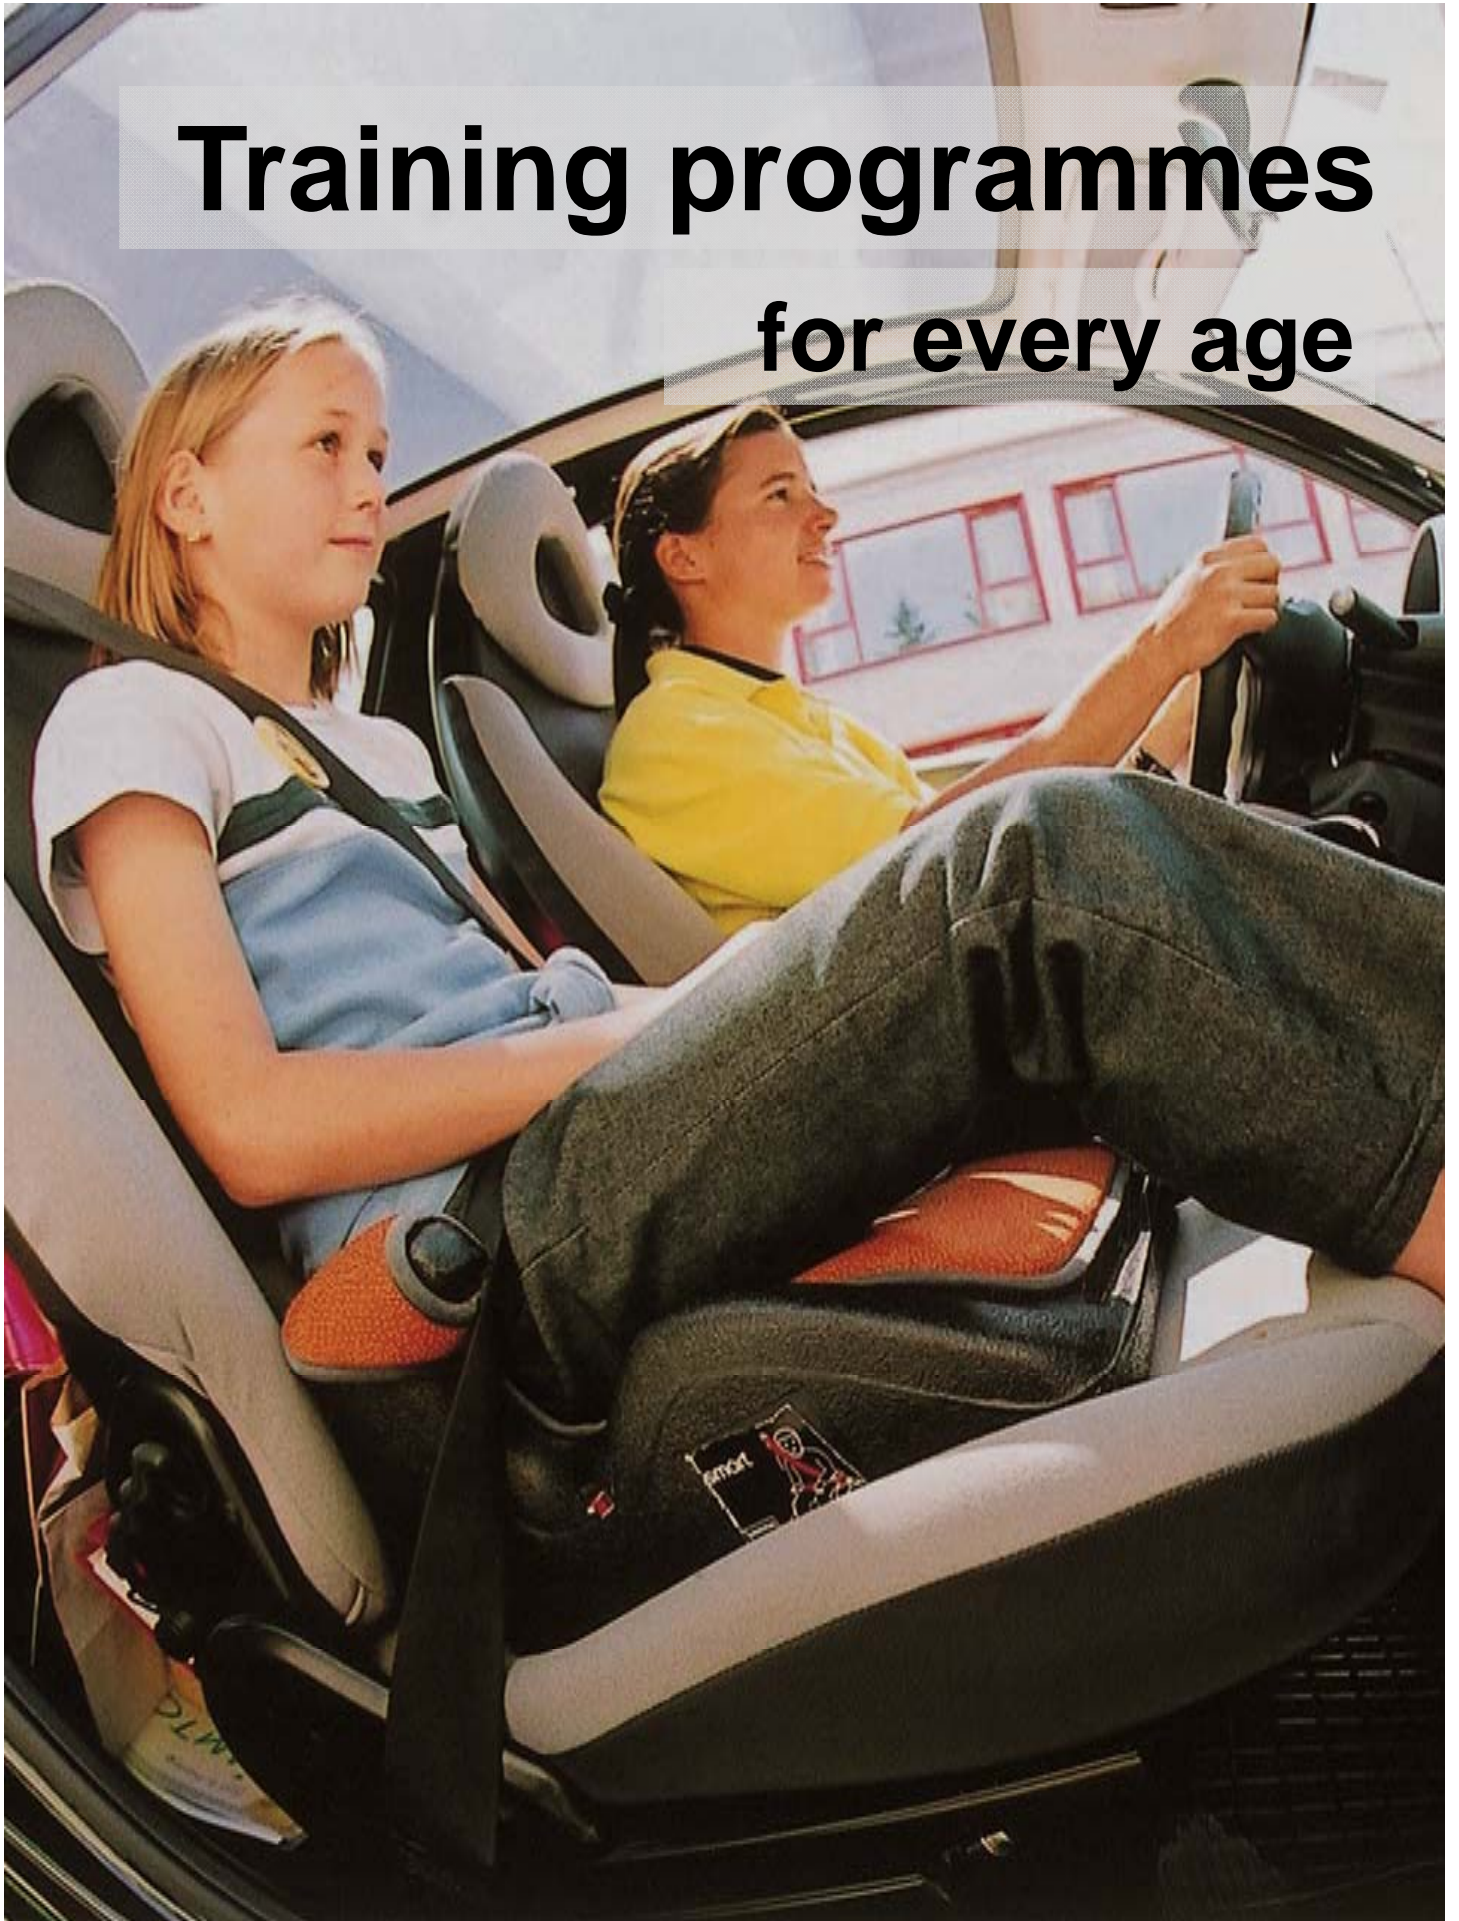

The road safety training **modules are dedicated to train drivers' reactions and their behaviour** in critical and dangerous driving situations. The desired effect is automation of reactions and sequences of actions. Additionally, **drivers will learn which factors can influence driving** situations. In this way they develop an understanding for wrong driving behaviour that may lead to critical driving situations. This **awareness helps to avoid critical and dangerous situations** in daily traffic.

All exercises that are executed on the Training Modules will **improve skills, knowledge and awareness** of the participants. Thus, for all exercises there are objectives regarding acquired skills, gained knowledge and drawn conclusions of the participants. Above that, there are objectives, which are valid for all exercises that are executed in the RSTC.

Such **superior objectives** are:

- **Recognising dangers** (as early as possible)
- **Avoiding dangers** (as early as possible and in a safe way)
- **Coping with critical driving situations**
- **Situations that cannot be mastered** by the participants should motivate them to avoid mistakes (especially to avoid those mistakes which lead to critical driving situations).

Training programmes for every age

Road Safety Training

A programme for every age group

Look & Click

Age 6/7; children learn the importance of looking when crossing the street as well as use of the seatbelt.

Hello Car

Age 8/10; children learn how to cross the street and about stopping distances and driver reaction.

Novice drivers

Mandatory for novice driver; Road safety training includes psychological group discussion. Very successful in terms of reducing accidents!

Stay mobile

Stay mobile! A training programme for women age 55 and men age 60 or elder.

Road Safety Training

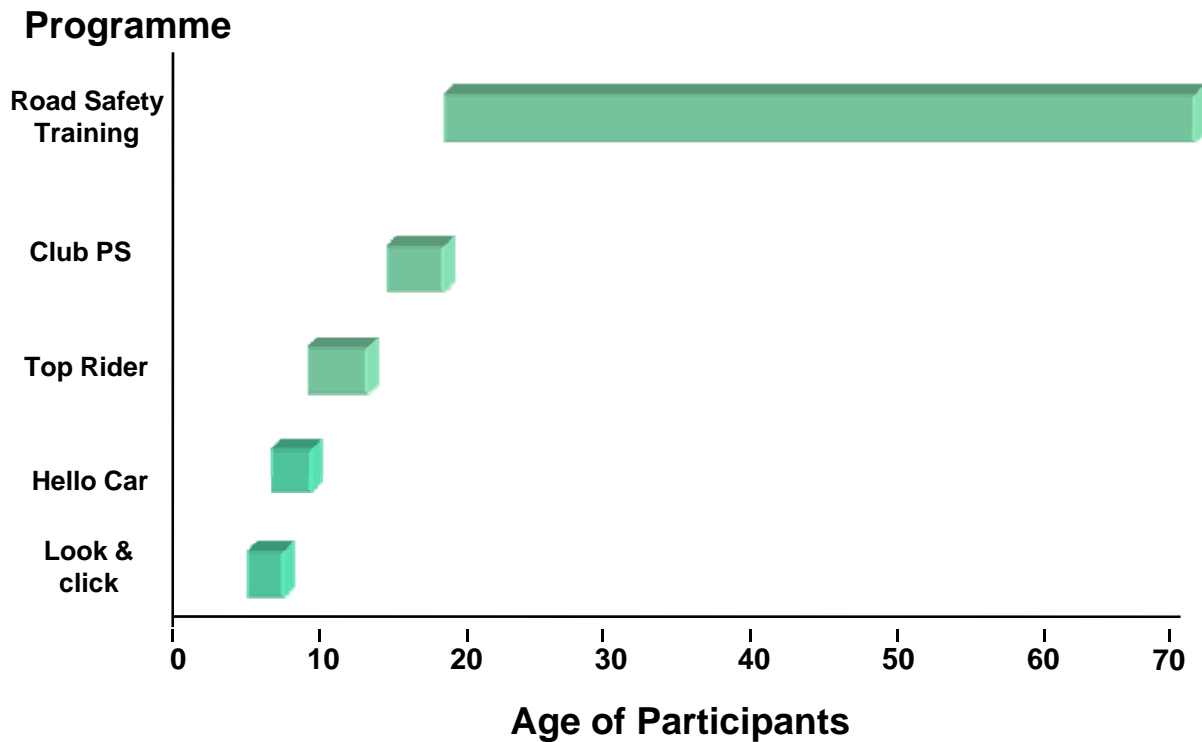

18 to 70: Various road safety training and activities for participants. All categories (motorbike, car, truck, etc.)

Road Safety Training

Road Safety Training

Training programmes for every age group

Target-group specific training for:

- Children and teenagers
- Compulsory multi-phase driver training for driving novices
- Professional drivers
- Retired drivers
- People with handicap

Training programs for:

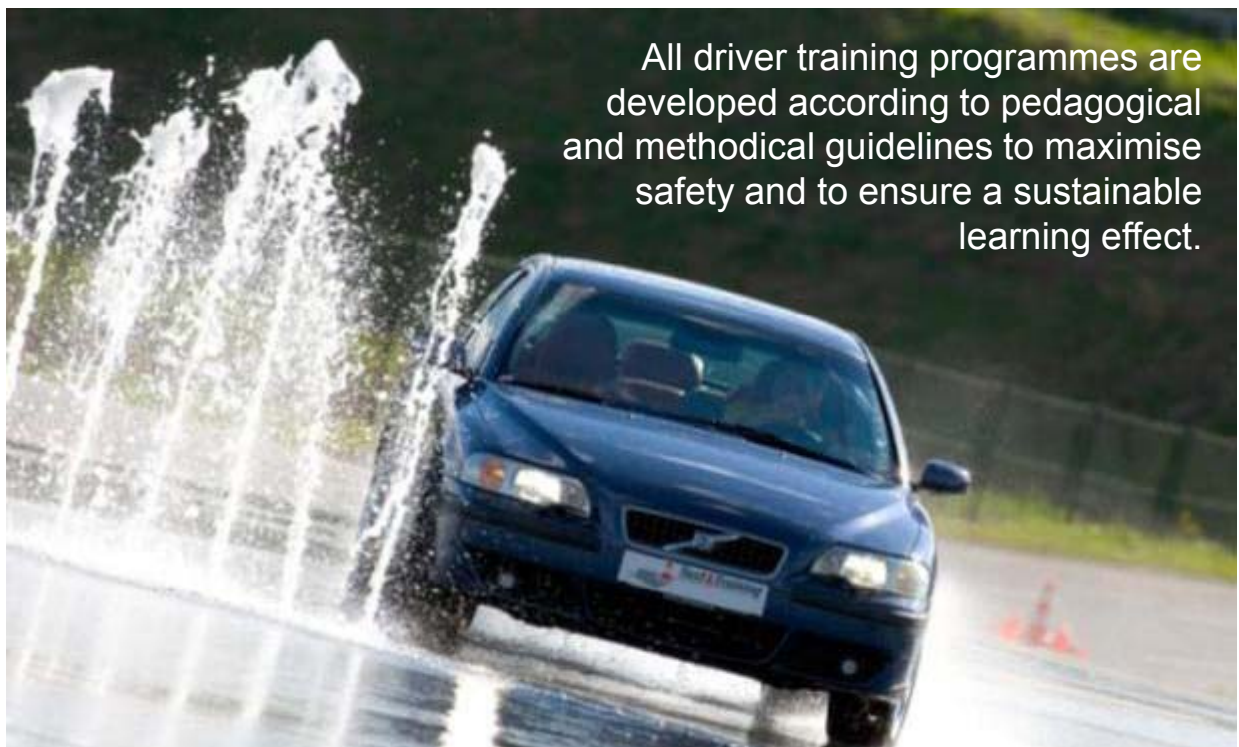

- Motorcycles
- Cars
- HGVs, busses, tractors
- Caravans, tankers, ...

Training programmes for all categories

Road Safety Training

Programmes for every category

Road Safety Training

Programmes for every category

Road Safety Training

Programmes for every category

Tank driver training was designed to prevent catastrophic roll over accidents. This training model is regularly used by blue chip customers like BP and Shell.

Truck training is designed to improve the operating efficiency and the economical output of companies.

Special programmes

Road Safety Training

Programmes for special target groups

Firefighters and Ambulance drivers need to be quick and safe at their place of action; This driver training programme increases skills and reduces accidents.

Police drivers must be able to handle their vehicles with high speed safely. This is trained in special programmes.

Handicapped people need to be as mobile as others; Multi-purpose training centres offer tailor-made driver training programmes to ensure mobility and safety!

Defensive training programmes for truck drivers save cost in terms of reduced damages and less fuel consumption.

Road safety training centres to be used for Military driver training. We train the trainers for such training programmes.

A tailor-made "blue light" training deals with specific road safety problems of police drivers. Know how, skills and driving confidence is increased by regular customers .

Road Safety Training

Events, product presentations

The RSTC will also provide training programme for safe off road vehicle use if required.

Companies can use Road Safety Training Centres for incentive events; either for customer retention or employee activities.

Sport car training programmes are high class training programmes. Special courses for all kind of super cars are provided.

Karting can be implemented in a road safety training centre. This will provide an attractive element for events.

Want to improve your vehicle handling? The RSTC will offer special drift training programmes to cover this field of driver training.

The RSTC includes a handling track for special driver training programmes.

Road Safety Training

Professional driver training

Professional driver training **improves driving and behavioral standards.** Well educated truck, bus and taxi driver will be safer partners on the road.

Economy training **saves fuel costs and plays a key role in the reduction of pollution.** Load safety training contributes to avoid damages and accidents. Reduction of accidents improves economical output and saves insurance costs.

RSTC Utilisation

Utilisation scheduling

Planning a balanced mixture of activities

Training programmes for different target groups and vehicle categories

Events and (product) presentations

Testing and research

Fun, action and motorsport feeling for everyone
